# Windowmaker Option
# Frame Purchase Order

WINDOWMAKER®
SOFTWARE

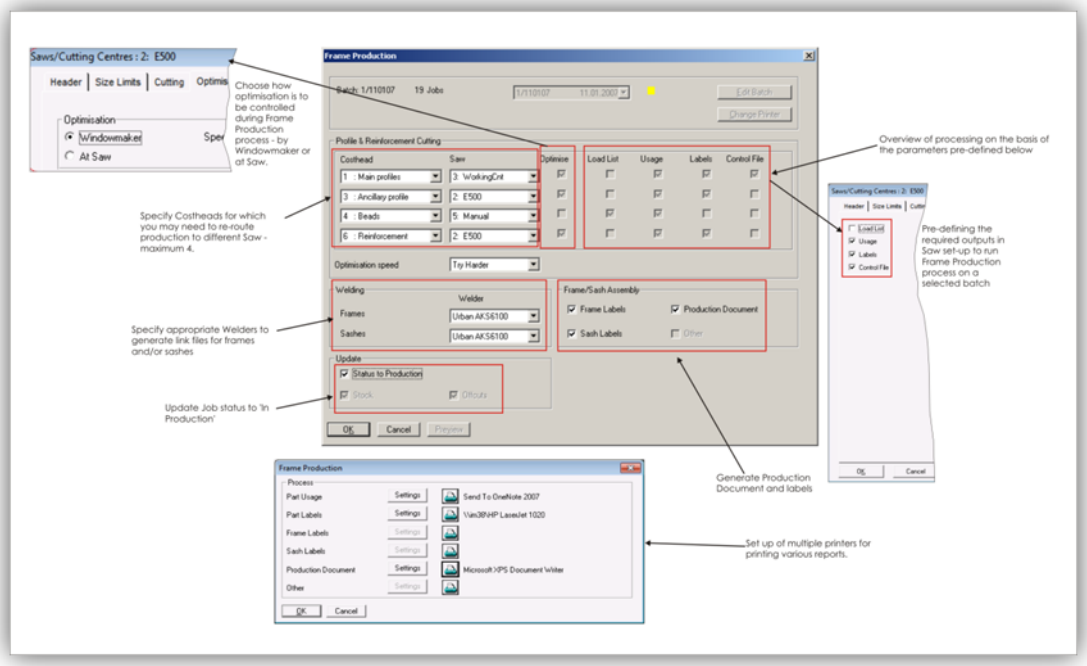
## Overview

A facility to run multiple frame production processes on a selected batch.

## Benefits

### The Fabricator

- Saves time by running multiple processes on a selected batch without any operator intervention
- Improves operational efficiency by splitting production across multiple saws
- Gains the flexibility to direct the output of various processes to different printers
- Gains the ability to have separate welder output for frames and/or sashes



## Features

- You can pre-define various parameters in saw set-up to run Frame Production process on a selected batch:
  - Whether to Optimise
  - Which saw to Re-use Offcuts on
- Following outputs are required:
  - Part Usage:
    - Load List
    - Usage
  - Labels
  - Control File
- You can specify as many as 4 Costheads and select a pre-defined saw for cutting/machining while processing Frame Production
- The program will display an overview of processing that will be done on the basis of the parameters pre-defined for a specified saw

- You can generate outputs for:
  - Welder Link file for frames and/or sashes
  - Frame Labels
  - Sash Labels
  - Assembly List
  - Link to Stock
- The program allows use of multiple printers for printing various reports
- You can update the status of Jobs to 'In Production', which will enable automatic:
  - Generation of Tracking records for frames and/or sashes
  - Flagging of production batch status to 'Processed', if using Production Scheduling

**Notes:**

- Frame Production process will be available only if offcut records are stored in the database
- Only Jobs at status equal to or greater than 'Ordered' and less than 'In Production' can be processed

## Related Options

- **Software:** You need Windowmaker Express or higher
- You need the relevant options required to generate various outputs
