

Windowmaker Option

Advanced Production Scheduling

Overview

A facility to handle multiple sites for factories/warehouses

Benefits

- ▲ An advanced facility for maintenance and use of a consistent production schedule
- ▲ All the benefits of [Production Scheduling](#)
- ▲ Gains the flexibility to optimise the production schedule as per requirements
- ▲ Gains the ability to account for extra days required for 'slow' bottlenecks such as Painting during scheduling
- ▲ Gains the ability to make changes to the production schedule of individual Sales Lines

Features

- ▲ All the features of Production Scheduling
- ▲ You can schedule the Sales Lines of a Sales Order into different production batches
- ▲ The program can account for the number of days required for each bottleneck during scheduling
- ▲ The program can allow automatic production scheduling of a Sales Order across different sites, if run in conjunction with the Multiple Locations option
- ▲ The program can automatically:
 - △ Generates allocation transactions for stocked components
 - △ Handles stocked standard Sales Lines
 - △ Makes adjustment of transactions on manual changes to the schedule
- ▲ You can:
 - △ Choose to source the standard Sales Lines from free stock or assign it to be manufactured
 - △ Use planned stock if free stock is unavailable
- ▲ The program can indicate 'Insufficient Physical Stock' of standard Sales Lines, and provide a choice to 'order' the Sales Line or 'abort' the scheduling
