

Windowmaker Option

Bar Optimisation II (Multiple Algorithms)

Overview

A facility to organise the cutting sequence of profile pieces to increase the yield from the available pieces, using advanced algorithms.

Benefits

The Fabricator

- ▲ Obtains better yield than with Bar Optimisation I option
- ▲ For other benefits, please refer [Bar Optimisation I](#)

Features

- ▲ Two advanced levels of optimisation are available to achieve higher yield than possible with Bar Optimisation I:
 - △ Try Harder
 - △ Try Very Hard
- ▲ For other features, please refer [Bar Optimisation I](#)

Note: Also refer to [Bar Optimisation III](#), a superior option.

Implementation

- ▲ You need [Windowmaker Express](#) or higher
- ▲ Data: Windowmaker profile and saw data needs to be correctly set-up to implement this solution
