

# Windowmaker Option

## Multiple Site Scheduling

### Overview

A facility to handle multiple sites for factories/warehouses.

### Benefits

#### The Fabricator

- ▲ Gains the ability to optimally utilise resources across different sites

### Features

- ▲ You can create or edit up to 9 sites for the factories/warehouses
- ▲ The program will consider the first site as the default site
- ▲ You can specify sites for Production batches, Delivery routes and Deliveries
- ▲ The program can display the site for a Purchase based on whether it is needed for Production, Delivery or Installation
- ▲ The Delivery site will be considered as the default Production site
- ▲ The program can treat the Production site as a hardcoded Option 'Prod. Site' that can be accessed in the System rules to:
  - △ Set a default
  - △ Disallow answers (e.g. Disallow a wood factory if a PVC-U window)
  - △ Test the site in order to e.g. set the capacity required at a specified bottleneck
  - △ You can edit the 'Prod. Site' for any sales line similar to other Options

- ▲ The program can schedule a sales order across multiple sites. This also requires the [Advanced Production Scheduling](#) option
- ▲ You can set-up stock for different sites
- ▲ You can specify sub-batching and trolley parameters for different sites

### Related Options

- ▲ You need [Windowmaker Express](#) or higher
- ▲ You need the [Advanced Production Scheduling](#) option to schedule across different sites
- ▲ You need the [Stock Control](#) option to handle stock transactions
- ▲ Training, Support and Consultancy: Significant
