

# Windowmaker Option

## Sash Labels

### Overview

A facility to print user-definable labels to be used on finished sash.

### Benefits

#### The Fabricator

- ▲ Gains the flexibility to customise the label format and content as required
- ▲ Improves productivity and minimises fabrication errors by providing detailed information for each sash at the right place
- ▲ Gains the ability to print Barcode information for sash, if used in conjunction with [Tracking](#)

### Features

- ▲ You can set-up a Sash Label in user-defined format
- ▲ You can generate individual labels for each sash in an Sales Line
- ▲ You can control the label size to match your existing stationery
- ▲ You can determine how the labels are output in a page by defining the:

- △ Number of labels across and down
- △ Horizontal and vertical distance between two labels

- ▲ You can define the number of labels to be output:

- △ Single label irrespective of the Sales Line quantity
- △ Multiple labels as per the Sales Line quantity
- △ The level of detail in a label can be controlled by using a range of data, text or option fields available

- ▲ The program offers a choice of fields including:

- |  |                                      |
|--|--------------------------------------|
| △ Pane Type  | △ Sash Width and Height              |
| △ Position Code  | △ Batch, slot and trolley numbers    |
| △ Logo   | △ Sales Order and Sales Line numbers |
| △ Customer name  | △ Location                           |
| △ Option answers   | △ Customer reference                 |
| △ Glass  | △ Delivery code                      |
| △ High-resolution design graphics with or without dimensions               | △ Date required                      |
| △ Multiline Production Note and Installation Note in Enterprise and higher | △ Barcode                            |

- ▲ You can select a Font for each field and specify its:

- △ Size
- △ Attributes (bold, italic or underline)

- ▲ You can define the size and scale of the graphics area on the label.

- ▲ The program can automatically fit-in graphics exceeding the defined area (indicated by a \*)

- ▲ The program supports the use of Windows printers

- ▲ You can output Sash Labels in sub-batched sequence

**Note:** Printing of barcode information is independent of the [Tracking](#) option, if using barcode-driven [Welders](#) and [Hinge Machines](#).
