

# Windowmaker Option

## User Data

### Overview

A facility to add User-Defined Fields in the Windowmaker database, to allow input and storage of additional information.

### Benefits

#### The Fabricator

- ▲ Gains the flexibility to input additional information via a program interface based on User-Defined Fields.
- ▲ Gains the ability to store User-defined information e.g., Architect details, Building owner's address, etc. for each Sales Order, Sales Line or Customer.

### Features

- ▲ You can add User-Defined fields in the Customers, Sales Orders and Sales Lines database tables, to enable input of required user data via Windowmaker.
- ▲ You can also input and store additional information for parts.
- ▲ The program stores the additional information in the corresponding database tables.
- ▲ The program allows output of this information in Customer Documents and Delivery Note.
- ▲ You can display a User-Defined data field on Sales Order/Sales Quote notebook.

**Note:** This facility is not available for duplicate Sales Lines.

### Related Options

- ▲ You need [Windowmaker SQL](#).
