

Windowmaker OnDemand

Instant Access **Anytime, Anywhere**

Windowmaker OnDemand is a unique solution, delivering instant access to your complete Windowmaker system at anytime, from anywhere.

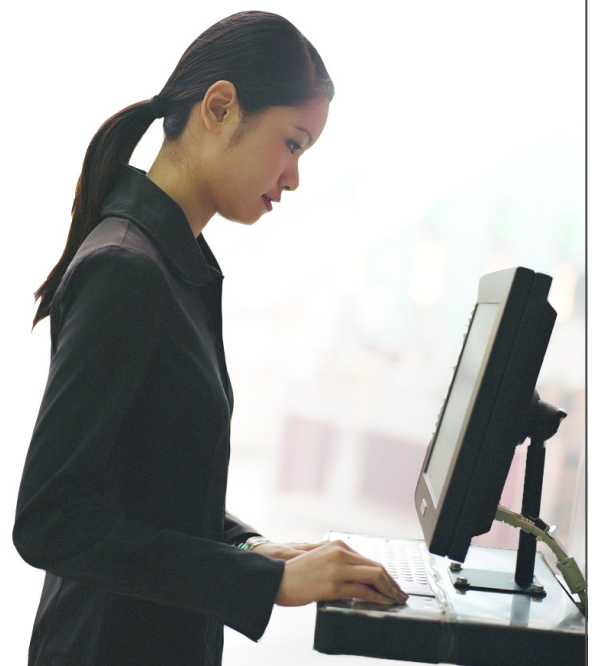

Up until now, managing your software - from creating quotes, to order entry, to production & reporting - could be complex, even on a single site. When running multiple sites, or supporting sales staff, resellers or installers, the problems could become more complex. Typical problems include:

- △ **High IT costs** through support and maintenance, with software to install, update and manage on every machine, with the risks of older versions being used
- △ **Data integrity problems**, due to multiple sites needing to replicate or exchange information with Head Office, or access the latest data
- △ **Complex administration** of what internal or external users need access, how to manage that

Windowmaker OnDemand provides a complete solution, creating a single access point that virtually any internet-enabled or Microsoft-based device can access. Totally customised to your requirements, Windowmaker OnDemand could change the way you run your business. Examples of how it can be implemented include:

- △ Providing full access to Windowseller for **resellers and installers**, with **no loss of functionality**, with **easy order transfer** into your system
- △ Allowing **sales staff** to access Windowmaker, with all their usual options and features, from any internet-enabled PC
- △ **Flexible access** across the company, for staff using Windowmaker just for reporting or specific tasks

Windowmaker OnDemand uses the latest technology to deliver a unique solution that changes the way you run your business - reduced IT administration, instant access to Windowmaker from any networked or internet-enabled PC and full functionality, rather than a limited feature website.

Windowmaker OnDemand

For **resellers and installers**, access to **Windowseller** is now even easier than ever.

Windowmaker OnDemand gives them **full access to live, current data** with no software installations required and **instant retrieval of their orders**

Windowmaker OnDemand gives the flexibility to **use 'Thin Clients' or older machines** to run Windowmaker

The Microsoft server technology means **greater flexibility** for users and much **simpler IT setup**

Ideal for **multiple sites**, Windowmaker OnDemand provides a central point for remote offices or locations to connect to.

This **eliminates complex setup and administration**, multiple databases and ensures all your live data is ready and available

For **remote users**, such as sales staff, Windowmaker allows instant access to the full Windowmaker product

With **only internet access required**, staff can access the latest version of the product, without any restrictions or software updates needed

- △ **Simple deployment** to users - only internet access is needed for external users (for sales staff or resellers/installers), or network access for local users
- △ **Unlimited growth** - additional users can be added quickly and easily, and third party software can be licensed (such as Microsoft Excel for reports or Microsoft Outlook for shared calendars)
- △ **Reduced IT administration** - with server licences, no software is installed locally. With only one update to run, one system to backup and one program to support, IT costs are significantly lower
- △ **Improved customer service** - by giving resellers and installers instant access to Windowseller, you can quickly update data, and instantly import their orders
- △ **Improved security** - all information is held and processed on the Windowmaker OnDemand server, and access settings can be defined per specific user or per user type
- △ **Microsoft technology** - Windowmaker OnDemand is built on Microsoft technology, making it quick and easy to learn and install
