

## The Future of Window Sales and Surveying

The Tablet PC Edition of Windowseller — offering all the rich functionality of the standard product, with advanced features from the Tablet PC

- ▷ Close more sales, and faster
- ▷ Improve accuracy and efficiency
- ▷ Reduce costs and lead times
- ▷ Sharpen your image
- ▷ Work wireless...and paperless

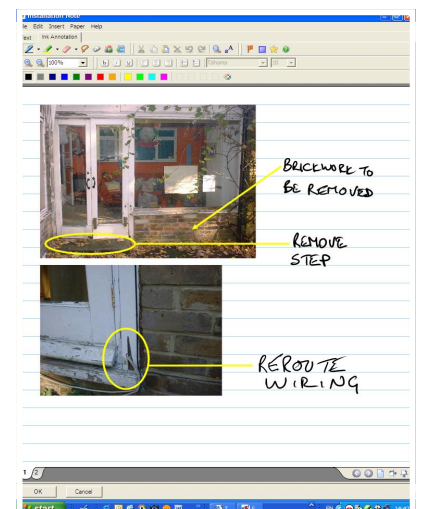

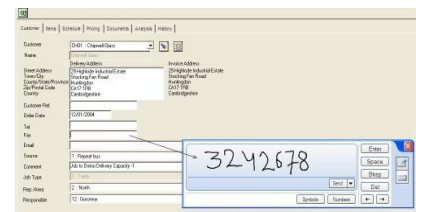

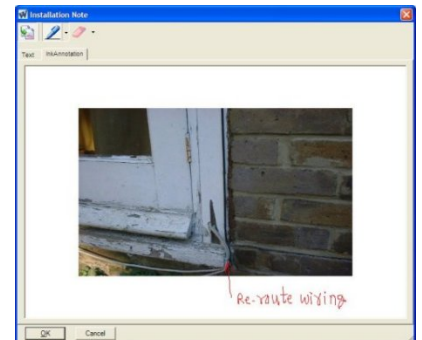

# Windowseller Tablet

## The complete paperless solution

Windowmaker Tablet includes all the features of the standard Windowseller product, with additional rich functionality from the Tablet PC system.

These includes the inclusion of Gestures, the innovative feature that enables quick editing and formatting. In addition, the ability to make written annotations to any image means that for both sales people (on pre-sales visits) and surveyors (reviewing and updating order details), extensive notes can be made that remain part of an order straight through to production.

## How does it work?

Windowseller Tablet has all the functionality of the standard Windowseller product:

1. Use a digital camera to take photos of the building
2. Launch Windowseller Tablet application on a PC
3. Work with the customer to add windows and doors to the house, including the use of Drag and Drop functionality for easy window design
4. Include PhotoFronts — after importing building photos, you can superimpose the proposed windows and doors (as above) — creating stunning Photorealistic displays (up to 9 per job/quotation)

However, when used on a Tablet PC the software is capable of much more. Elements - from transoms to sashes - can be added intuitively simply by using the stylus. This flexibility makes creating or editing a design simple. The portability of a Tablet PC means that this can also be done on-site, around the building—meaning a quick and efficient method for keeping the details up to date.

As well as changing the look and feel of a design, notes can also be easily added by both sales staff and surveyors. Working with digital images of a building, rich text can be incorporated, and then included in an order, to ensure all the necessary requirements are included when the order is processed through to production and then installation. From building notes to installation guidelines, nothing is left out.

## Key Benefits

- ▷ Information logged on site quickly, accurately and uniformly, then transferred electronically
- ▷ Feedback revised schedules from site to enable better stock control and potential for JIT deliveries
- ▷ Avoid errors due to misinterpretation of handwritten documents or lack of information
- ▷ Reduce overhead and increase efficiency by removing need to duplicate data entry
- ▷ Simplify internal processes audit trails
- ▷ Capture customer requirements more quickly with Handwriting recognition capabilities
